

Special cold weather Instructions

All SINAK materials must be protected from freezing. The materials are designed to be applied when the ambient temperature is 34 degrees or rising. In the event that schedules do not allow for these temperatures or when the weather window is less than 4 hours the follow recommendations are critical in maintaining SINAK's ability to ensure the VC-5 warranty is issued.

1. Whenever the weather window or conditions can not be maintained, you must contact your SINAK representative to verify conditions. Only a SINAK representative can extend the application time for VC-5. Asking for forgiveness is not an option.
2. In the event that the VC-5 can not be installed under the normal conditions, the slab must be water cured until the appropriate conditions present. The duration of this condition will be determined by the SINAK representative.
3. If cold conditions are present, in addition to water curing, thermal blankets are to be used.

The primary emergency contact for VC-5 is Jeffrey Mosley @ 661-428-1211. This is a 24-hour number.
